Enterprise Research Shield

"Insights without exposure."

What is ERS?

ERS is a **protection tool** for sensitive documents. All analysis occurs locally – **no data leaves your control.**

Key Features

ERS Memory Vault	Your data makes ERS smarter for you – never for anyone else
Koda Trust Score	Continuous health check with measurable security (0–100)
Self-Healing	Automatic problem resolution – fewer support tickets
Natural Language	Logs in Swedish/English/German – not technical noise
Virus Protection	Integrates with existing antivirus software

Data Ownership

All memory is customer-owned. Time-limited, automatically deleted, policy-controlled. The vendor has **no access** to customer data.

Designed for Procurement

- NIS2 compatible • Audit documentation • Configurable policy • Local operation

Installation & Updates

Easy server installation. Cryptographically signed updates. *"We update the system – not your information."*

Summary

Challenge	ERS Solution
Data can leak	All processing local
Hard to prove security	Koda Trust Score + audit trail
Systems learn from others' data	ERS Memory Vaults – isolated
